# Exequiel Sabatie

Full Stack Developer | React · Next.js · TypeScript | BIM & AWS | Remote  
Argentina

## Summary

Full Stack Developer | PHP, React & Node.js

I focus on building software that lasts. My experience spans from developing products from scratch to maintaining and evolving systems in high-demand corporate environments.

I'm currently a Full Stack Developer at Enarvi, fully assigned to internal projects for Amazon, working with their internal tools, CI/CD pipelines, and production workflows across both front-end and back-end systems.

Earlier in my career, I worked on a civil engineering application (PHP / BIM / ACC) that was later acquired by a leading technology corporation. During its transition to a React and Node.js stack, I collaborated on the migration process and subsequently took long-term ownership of the project, maintaining, improving, and evolving both the back-end and front-end over more than four years.

I also built and operated a marketplace classifier that remained profitable and self-sustaining for over two years, reinforcing a strong product mindset and cost-aware decision-making.

I value maintainable architectures, technical ownership, and teams that take software craftsmanship seriously. I'm especially interested in complex, long-term projects involving React, Laravel, and system architecture.

---

## Experience

Enarvi

Systems Developer – Amazon (External via Enarvi)

November 2021 - Present (4 years 5 months)

Assigned full-time to Amazon enterprise initiatives, developing and maintaining production-grade systems operating at scale.

Work within high-standard engineering environments using trunk-based development, mandatory peer reviews, automated CI/CD pipelines, and continuous production delivery.

Take end-to-end ownership of complex features — from architecture and implementation to deployment and operational reliability — ensuring stability in high-impact business workflows.

Contribute to process optimization and system improvements that directly increase operational efficiency across large-scale construction technology platforms.

## BIM & ACC Project Management

Project Developer

2021 - Present (5 years)

Built from scratch using pure PHP, HTML, CSS, MySQL, and Bootstrap. Integrated Autodesk APIs for BIM 360 and ACC project tracking. Acquired by an internal Amazon group. Initially collaborated during React + AWS rewrite. Currently developer, responsible for ongoing expansions, feature development, and maintenance.

## Used Video Game Marketplace

Developer

July 2022 - September 2024 (2 years 3 months)

Developed in PHP, HTML, Bootstrap, JavaScript, and MySQL. Integrated MercadoLibre API: search, token refresh via cron, automated listings. Admin panel with roles, dynamic pagination, responsive design, and centralized error logging. Generated steady income before API restrictions paused operations.
